

See You in Chicago!

On October 8-11, ChemStation will be attending PROCESS EXPO 2019 at McCormick Place in Chicago. Produced by the Food Processing Suppliers Association (FPSA), PROCESS EXPO is the nation's largest trade show dedicated to bringing the latest technology and integrated solutions to all segments of the food and beverage processing and packaging industry. If you have challenges in these industries, this is the trade show to attend! According to their website, attendees will enjoy these benefits of the show:

- Attendees have access to the nation's largest collection of equipment manufacturers focused on food and beverage processing.
- PROCESS EXPO features a premier education program focused on today's most critical challenges including a special track on food safety and hygienic design.

- An interactive trade show floor and sector-specific maps allow you to navigate easily to find exhibitors. You'll have access to hundreds of suppliers who will display new equipment and the latest technology in food and beverage processing and packaging.
- Suppliers have solutions that can be applied across multiple food and beverage sectors – you never know what you may find that could increase your efficiency and expand your revenue streams.

If you are planning to attend this event, please visit the ChemStation team in Booth 1222. Learn more about this event at <https://www.myprocessexpo.com>. If you still need to register, use complimentary code 82587.

Oil Field Services

Did you know that ChemStation offers a selection of specialty chemical products for oil field services? This includes products to clean oil rigs and products that remove injection grease and concrete. Some of the benefits of using ChemStation include:

- We have the ability to clean your exterior radiators on the spot with our spray arch system and avoid the costs associated with pulling the trucks off the line.
- Our products thoroughly break down injection grease and clean completely, leaving no film.
- We can custom-formulate truck washes, equipment washes, radiator cleaners, rig washes, wireline degreasers, and concrete removal products to meet your particular needs and specifications.
- Our refillable delivery system eliminates potential environmental contamination from discarded containers.

Learn more about all the industries we service by visiting chemstation.com.

Tree Planting in the Fall

There is still time to plant a tree this year! Even if it's cold out, as long as a spade can be inserted into the ground, it's okay to plant trees. Check out arboradayblog.org for answers to all your fall planting questions, including those below:

What is a benefit of planting trees in the fall? *The tree roots remain active throughout the winter, taking advantage of moisture from rain or snow. Trees planted during this season get a nice head start on establishing themselves in the spring through vigorous root elongation and a flush of twig growth.*

What can I do to prepare for my trees' arrival?

- *Pre-dig your holes, so when your trees arrive you are prepared to immediately get them in the ground.*
- *Store the dirt you removed from the hole in a garage or tool shed where it will not get as cold.*
- *Pre-purchase mulch, as some stores may not have as large of a mulch supply in their inventories as the season progresses. You want to make sure you've got plenty of mulch on hand for your newly planted trees once they arrive!*

Your perspective is always limited by how much you know. Expand your knowledge, and you will transform your mind.
