

BEFORE CHEMSTATION

AFTER CHEMSTATION

Keeping It Clean

We help our customers to create a safe, clean, and organized chemical room. As you can see in the pictures, we helped this bakery customer remove the hassle of reordering, storing, and disposing of drums. We installed refillable tanks that pump directly from the tank, through the wall, and into the machines to clean – making their workday more streamlined, safe, and efficient.

Our customers work with their local ChemStation team to customize an account management plan and address sanitation issues before they arise. Our local team can respond rapidly to service needs.

Backyard Composting

EPA.gov lists the following tips when making a compost pile in your backyard. Regular mixing or turning of the compost and some water will help maintain the compost.

- Select a dry, shady spot near a water source for your compost pile or bin.
- Add brown and green materials as they are collected, making sure larger pieces are chopped or shredded.
- Moisten dry materials as they are added.
- Once your compost pile is established, mix grass clippings and green waste into the pile and bury fruit and vegetable waste under 10 inches of compost material.
- Optional: Cover top of compost with a tarp to keep it moist. When the material at the bottom is dark and rich in color, your compost is ready to use. This usually takes anywhere between two months to two years.

Visit www.epa.gov/recycle/composting-home#basics for more information – including what are “browns” and “greens,” what (and what not) to compost, and why.

The positive thinker sees the invisible, feels the intangible, and achieves the impossible.
