

ORIGINAL LINE GREENSYSTEM SAFER CHOICE

Three Shades of Green

ChemStation offers three lines of cleaning solutions, and all of them are green. Our original line of products has always been environmentally friendly, biodegradable, and water-based. We also offer two more green choices – GreenSystem® Cleaners and Safer Choice Products, which meet U.S. EPA Safer Product Standards.

GreenSystem is our line of eco-friendly products that reduce the health and environmental impacts compared to similar products used for the same purpose.

Then we have our products that have the Safer Choice label. This label ensures that the product contains only those ingredients that pose the least concern among chemicals in their class. Learn more about Safer Choice at www.epa.gov/saferchoice.

Combine any of our products with the refillable container delivery system, and you've got the perfect answer to your green concerns!

What is AirNow?

Interested in learning more about the air quality in your area? Visit www.airnow.gov.

Their site highlights air quality in your local area, while still providing air quality information at the state, national, and world views. Their interactive map even lets you zoom out to get the big picture or drill down to see data for a single air quality monitor.

AirNow reports air quality using the official U.S. Air Quality Index (AQI), a color-coded index designed to communicate whether air quality is healthy or unhealthy for you. The higher the AQI value, the greater the level of air pollution and the greater the health concern. For example, an AQI value of 50 or below represents good air quality, while an AQI value over 300 represents hazardous air quality.

When you know the AQI in your area, you can take steps to protect your health.

PPE Training and Retraining

Employers are required to train each employee who must use PPE. In OSHA's Personal Protective Equipment guide, it states that employees must be trained to know at least the following:

- **When PPE is necessary.**
- **What PPE is necessary.**
- **How to properly put on, take off, adjust, and wear the PPE.**
- **The limitations of the PPE.**
- **Proper care, maintenance, useful life, and disposal of PPE.**

Employers should make sure that each employee demonstrates an understanding of the PPE training as well as the ability to properly wear and use PPE before they are allowed to perform work requiring the use of the PPE. If an employer believes that a previously trained employee is not demonstrating the proper understanding and skill level in the use of PPE, that employee should receive retraining. Other situations that require additional or retraining of employees include the following circumstances: changes in the workplace or in the type of required PPE that makes prior training obsolete.

Avoid doing what you would blame others for doing.
– *Thales*

I think it's very important to have a feedback loop, where you're constantly thinking about what you've done and how you could be doing it better. I think that's the single best piece of advice: constantly think about how you could be doing things better and questioning yourself.
