

Preventing Foodborne Illness

The fifth World Food Safety Day (WFSD) will be celebrated on June 7, 2023 to draw attention and inspire action to help prevent, detect and manage foodborne risks, contributing to food security, human health, economic prosperity, agricultural production, market access, tourism and sustainable development. This year's theme, "Food Standards Save Lives," highlights the role of established food safety practices and standards, which ensure food safety and quality.

Learn more about food safety by reviewing the "Five Keys to Safer Food" Poster from the World Health Organization. It focuses on the importance of keeping clean, separating raw and cooked, cooking thoroughly, keeping food at safe temperatures, and using safe water and raw materials. With each step, the poster explains not only how to do this, but why it is important.

Take an active role in preventing foodborne illness by practicing safe food handling, keeping informed, and promoting food safety.

Helping Find Solutions in Dairies

It's official... ChemStation has dairy experts, and we're ready to assist you! From problem-solving to application training, ChemStation's philosophy is to find the best answer for your business and continue looking for improvement opportunities.

Overview: A dairy farm in Seattle was in need of a cleaning system for their specialized production process.

Challenge: This company uses a unique process to bottle their products in returnable containers. The returnable containers require a specialized system that thoroughly cleans through each stage of production, and they needed a vendor that could provide in-depth training.

Solution: ChemStation aimed to bring in a cleaning system for their specialized production system. The entire ChemStation system provided the customer with a solution.

Results: ChemStation's refillable totes, custom solution ratios, and hands-on training were the key components that made up a successful product and service package for this account. ChemStation installed tanks and delivered products at this account almost seven years ago and has kept the customer happy to this day.

Forklift Stands

Don't have a tank filling area near an exit or dock? Our system is still the solution!

By using our Forklift Stands, the tank can be transported to a more convenient location to refill.

We can simply place the tank in the blue Forklift Stand and when our remote inventory system alerts that product is low, the entire unit can be conveniently moved by forklift to fill at a dock door. These stands are compatible with our 120- and 165-gallon tanks.
